NOVA Regression Tests

NOVA is a prototype application and because of this has a limited path of functionality. Issues are expected to be present on the current version.

NOVA explainer video: https://ndtp.co.uk/demonstrators/nova-energy-system/

[1 Login] [2 Navigation] [3 Polygon] [4 Layers] [5 Asset]

Login

TC - 1

Pre-conditions: You will need a registered NOVA user.

TC 1.1 - Successful Login	Expected Results	
Given I login to the NDTP app with valid credentials **When** I click the NOVA application **Then** I see the satellite map view	Upon login the user should be on the Satellite map style, with the zoom-level set to entirety of the UK. Any layers or assets added in a previous session are reset.	 Map landing page

TC 1.2 - Successful Logout	Expected Results	
Given I login to the NDTP app with valid credentials **And** I click the NOVA application **And** I click the profile menu **When** I click sign out **Then** I am logged out	The user should be able to log out via the profile menu options. The user should be returned to the NDT login page after successful signout.	 Profile menu Login page

Navigation

TC - 2

TC 2.1 - View privacy notice	Expected Results	
Given I login to the NDTP app with valid credentials	The user should be able to	

And I click the NOVA application **And** I click the profile menu **When** I click privacy notice **Then** I see the privacy notice page	navigate to the Privacy Notice page.	Profile menu Privacy notice

TC 2.2 - Search bar	Expected Results	
Given I am on the satellite map view **And** I click on the search bar **When** I search for an area **Then** I see the area on the map	The user should be able to search for an address at a borough-level in the search bar. The user should be automatically taken to the searched area in the map view.	 Search bar Search navigates camera view to area

Polygon

TC - 3

TC 3.1 - Draw a polygon	Expected Results	
Given I click draw polygon **When** I draw a polygon **Then** I see a set button **And** I see a delete polygon button	The user should be able to draw a polygon that can be either set and confirmed or deleted.	 Drawn polygon

TC 3.2 - Toggle polygon visibility off	Expected Results	
Given I have a set polygon area **When** I click toggle polygon **Then** I do not see a drawn polygon	The user should be able to toggle the visibility of a drawn polygon off	 Toggle polygon visibility

TC 3.3 - Toggle polygon visibility on	Expected Results

Given I have a set polygon area **When** I click toggle polygon **And** I click toggle polygon **Then** I see a drawn polygon	The user should be able to toggle the visibility of a drawn polygon on

TC 3.4 - Delete a drawn polygon	Expected Results
Given I have set a polygon **When** I click delete polygon **Then** the polygon is deleted	The user should be able to delete a polygon that has been set.

TC 3.5 - Cancel drawing a polygon	Expected Results
Given I click draw polygon **When** I click delete Polygon **Then** I cancel drawing a polygon	The user should be able to cancel out of drawing a polygon.

TC 3.6 - Cancel setting a polygon	Expected Results
Given I click draw polygon **And** I draw a polygon **When** I click delete polygon **Then** I cancel drawing a polygon **And** a polygon is deleted	The user should be able to delete a polygon before setting it.

TC 3.7 - Cancel applying layers to polygon	Expected Results	
Given I click draw polygon **And** I draw a polygon **And** I click set **When** I click delete polygon **Then** I cancel drawing a polygon **And** a polygon is deleted	The user should be able to delete a polygon after setting it.	 Delete option after polygon is set

Layers

TC - 4

TC 4.1 - Details of unsuitable area	Expected Results	

Given I have a polygon heat map **When** I click a red area **Then** I see details for unsuitable area	The user should be able to click a red area and see the details as to why the area is unsuitable for asset placement. The details should be relevant to the Layers filter applied.	 Unsuitable details

TC 4.2 - Details of cautionary area	Expected Results	
Given I have a polygon heat map **When** I click a yellow area **Then** I see details for cautionary area	The user should be able to click a yellow area and see the details as to why the area is cautioned for asset placement. The details should be relevant to the Layers filter applied.	 Caution details

TC 4.3 - Details of suitable area	Expected Results	
Given I have a polygon heat map **When** I click a green area **Then** I see details for suitable area	The user should be able to click a green area and see that there were no issues found in relation to the applied Layers filters.	 Suitable details

TC 4.4 - Edit Layers	Expected Results	
Given I have a set polygon area **When** I change the layers filters **And** I click apply **Then** I see a heat map calculated in the polygon	The user should be able to change the Layers filters from default and apply the filter. The user should see the heat map change in the polygon area depending on the filters applied.	 Editing properties of Layers

TC 4.5 - No Layers filters	Expected Results	
Given I have a set polygon area **When** I clear the layers filters **And** I click apply	The user should be able to apply 0 Layers resulting in a suitable polygon area.	 No Layers applied

Then I see a suitable polygon heat map		

Asset

TC - 5

TC 5.1 - View Asset window	Expected Results	
Given I have a polygon heat map **When** I click add asset **Then** I see the asset window	The user should be able to see a window with the following asset details: • Asset type - Wind Turbine / Solar Panel • Tabs - Preview / Specifications • Asset Model - Vestas / Siemens • Cancel / Select	 Asset window Asset specifications

TC 5.2 - Unsuitable position	Expected Results	
Given I have a polygon heat map **And** I click Add asset **And** I select an asset **When** I hover over a red area **Then** I see an unsuitable tooltip	The user should see an 'Unsuitable' tooltip when hovering over red areas of a polygon's heat map.	 Unsuitable asset area

TC 5.3 - Cautionary position	Expected Results	
Given I have a polygon heat map **And** I click Add asset **And** I select an asset **When** I hover over a yellow area **Then** I see a caution tooltip	The user should see an 'Caution' tooltip when hovering over yellow areas of a polygon's heat map.	 Cautionary asset area

TC 5.4 - Suitable position	Expected Results	

Given I have a polygon heat map **And** I click Add asset **And** I select an asset **When** I hover over a green area **Then** I see a suitable tooltip	The user should see an 'Suitable' tooltip when hovering over green areas of a polygon's heat map.	 Suitable asset area

TC 5.5 - Cannot place Asset outside polygon	Expected Results	
Given I have a polygon heat map **And** I click add asset **And** I select an asset **When** I hover outside of a polygon **And** I place an asset **Then** I cannot place an asset	The user should not be able to place an asset outside of a drawn polygon.	 Cannot place Asset outside of a polygon

TC 5.6 - Edit placed Asset	Expected Results	
Given I place an asset **When** I click Edit **And** edit the asset type **And** I place an asset **Then** I can see asset type description has updated	The user should be able to change the details of an asset, even after it has been placed.	 Edit placed Asset

TC 5.7 - Move placed Asset	Expected Results
Given I place an asset **When** I click Move **Then** I move an asset	The user should be able to move an asset within the area of a polygon.

TC 5.8 - 3D Asset view	Expected Results	
Given I place an asset **When** I click 3D view **Then** I see the asset in 3D	The user should be able to switch the map to a 3D view and see a 3D rendered model of the placed asset.	 3D model of asset

TC 5.9 - Rotate Asset placement	Expected Results	
Given I have a polygon heat map **When** I rotate the camera **And** I place an asset **And** I click 3D view **Then** I see the asset in 3D **And** the asset has rotated	The user should be able to change the orientation of the placed asset by rotating their map view before placement.	 3D Asset model rotated in relation to map camera

TC 5.10 - View 3D Asset with no polygon	Expected Results	
Given I place an asset **And** I click 3D view **And** I click Toggle Polygon **Then** I see the asset in 3D **And** I do not see a drawn polygon	The user should be able to hide the polygon area and still see a 3D model of an asset on the map.	 3D asset model with polygon hidden

TC 5.11 - Delete a placed Asset	Expected Results
Given I place an asset **When** I click delete **Then** I do not see the asset on the map	The user should be able to delete a placed asset.

TC.12 - Connect to Grid	Expected Results	
Given I place an asset **When** I click connect to grid **And** I select a substation **Then** I see a connection grid view	The user should be able to connect an asset to the grid, select a substation and see a connection grid view.	 Connect to grid button Choose a substation Connection grid view

TC.13 - Change substation	Expected Results	
Given I see a connection grid view **When** I select a substation **Then** I see connection grid banner update its details	The user should be able to change the selected substation on the connection grid view. The user should see the banner details at the bottom of the screen update.	 Substation dropdown select

TC.14 - Exit grid connection view	Expected Results	
Given I see a connection grid view **When** I click exit grid connection view **Then** I do not see the grid connection view	The user should be able to exit the grid connection view. The user should be zoomed into the polygon area by default.	 Exit Grid Connection view
